PROFESSIONAL SUMMARY

Results-driven Full-Stack Software Engineer with over 2 years of experience building scalable backend APIs and mobile-first, responsive frontend interfaces. Highly proficient in the modern JavaScript/TypeScript ecosystem, specifically **Next.js, React, Node.js, and NestJS**. Proven track record of designing EdTech platforms and SaaS tools (including a zero-trust university attendance system) optimized for performance and reliability across low-connectivity environments. Passionate about leveraging technology for education and social impact.

PROFESSIONAL EXPERIENCE & KEY PROJECTS

Smart Classroom Attendance (Capstone Project) — *Lead Full-Stack Engineer*

2023 – PRESENT

- Built responsive, mobile-first frontend interfaces using **Next.js, React, and Tailwind CSS** to ensure accessibility for students on low-end devices.
- Designed scalable backend architecture and managed data models using **PostgreSQL and Supabase**.
- Engineered a zero-trust, multi-factor attendance flow integrating GPS geofencing, BLE proximity, and Biometrics, effectively eliminating proxy attendance.
- Collaborated closely with academic stakeholders to understand field needs and translated them into actionable dashboard features for program staff.

Storely (Multi-Vendor Marketplace) — *Full-Stack Software Engineer*

2023 – PRESENT

- Developed highly performant user interfaces and vendor dashboards end-to-end using **TypeScript and Next.js**.
- Managed server state, data fetching, and API integrations seamlessly utilizing modern React patterns and **TanStack React Query**.
- Designed efficient database schemas and implemented background processes to handle concurrent vendor onboarding and inventory updates.
- Maintained strict code quality through comprehensive testing, PR reviews, and performance optimization for patchy network conditions.

TECHNICAL SKILLS

Frontend

TypeScript, Next.js, React, Tailwind CSS, TanStack React Query, Progressive Web Apps (PWA), CapacitorJS.

Backend

Node.js, NestJS, Express.js, RESTful API Design, Microservices, Python (Django).

Database & State

PostgreSQL, Supabase, MongoDB, Redis & BullMQ (Background Jobs), Data Modeling.

DevOps & Tools

Docker, Git/GitHub Actions, CI/CD, Postman, AWS S3/Object Storage.

SecureCipher & Card Validator API — *Backend Engineer*

2022 – 2023

- Architected and developed scalable backend APIs using **NestJS, Node.js, and TypeScript**.
- Implemented cryptographic middleware (EdDSA, ECDH) to secure RESTful API communication and ensure end-to-end payload encryption.
- Containerized the application using **Docker** and built automated CI/CD pipelines via GitHub Actions to maintain deployment reliability.

Pharmaloop (SaaS) — *Software Engineer (Collaborator)*

2023 – PRESENT

- Collaborated across a full-stack environment utilizing **React, TypeScript, and Python** to build a centralized real-time inventory and billing system.
- Integrated third-party APIs (Paystack, WhatsApp Cloud API) and background task processing queues for automated notifications and reporting.

EDUCATION

Nnamdi Azikiwe University, Awka — *Bachelor of Electronic and Computer Engineering*

NOV 2021 - SEPT 2026

Focus: Software Engineering Fundamentals, Systems Architecture, and Database Design.
